

NEWSLETTER Dec 09 / Jan 2010

Hi Everyone,

The Xmas season seems to have arrived in the usual hurry with everyone saying "Xmas already" - it goes without saying I wish you all a Merry Xmas and hope you have a good time sharing it with family and friends.

Since my last newsletter the number of people taking colostrum for serious degenerative disease has risen dramatically and the question might be asked why, what has prompted them. What has happened is that some people with chronic pain, MS, vision problems, stomach problems, Parkinson's etc are reporting substantial improvements in their way of life. In many cases the medical profession has no more answers except to prescribe more pain killers. People have been looking to medicine to find relief but now they are turning towards nutrition and nature for the answer. It is ironic that once medicine and medical knowledge was all derived from nature.

It has always been my belief that we should try and prevent illness and one good way has always been by good nutrition. A hospital bed is not the sort of place you want to wish you had eaten less Fried Chicken or actually had eaten some real green vegetables instead of fries. That being said once you are ill then there are some things you can do to improve the situation.

Degenerative disease is not reversible but we can try to improve lifestyle and the quality of life. The Alpha Lipid colostrum seems to be doing that with some 'miraculous' results in some places. This has created a whole new surge of people suddenly turning to and understanding the benefits of colostrum.

Our Adult Stem Cells are there to help the body heal and repair itself and they are directly affected by the health of our immune system. If under attack or poorly maintained our immune system can cease to function correctly allowing our immune system to shift up or down depending on the type of stress it faces. If it moves down then your body becomes susceptible to virus, bacteria, cancer and many other illnesses or if it moves up 'over reactive' then you become more likely to get autoimmune diseases such as MS, allergies / chemical sensitivities and so on. Age also diminishes our immune function hence aging and our increasing susceptibility to illness.

So one way of correcting this situation is to shift our immune levels back to a neutral position and then increase the degree of immunity. We can do this by taking colostrum which is the most potent and richest food known to man; it's natural purpose

was to provide us with immunity from birth. It is rich in antibodies and cell signaling messengers that modulate the immune system as well as other growth factors that stimulate stem cell activity. These growth factors do many things including enhancing stem cell production or repairing and regenerating tissue. Colostrum also includes Proline rich polypeptides which promote a proper response to microbial invaders, toxins or allergens through modulating the immune system and a natural killer cell (NKC) which seeks out and kills invaders.

Our Cellworx product is loaded with these Proline rich polypeptides which modulate the immune system bringing it back to the neutral position. Hence we talk about it 'resetting' your immune function. Our other colostrums increase the immune levels however it is important to understand that they do so because they are specially formulated to be many more times more effective than any other colostrum on the market. I have seen unscientific surveys where people were measured to have 800 adult stem cells per milliliter of blood and after a course of our colostrum re-test at 4000 per milliliter of blood. The more stem cells circulating the more the body can repair itself. Some work has also been done on how much the alpha lipid increases the colostrum's ability to do its work in light of the rigors of the gastric environment. There is some comment that this could be as high as 6 times more effective.

The new nutraceutical products designed by New Image are Cellworx and Colostem and are both designed to add support to the immune system allowing Adult Stem Cell Production to flourish in the following ways. I have repeated this information from the last newsletter as it is important to new users.

Cellworx Oral Spray is designed to reset the way the body makes those stem cells and get that process back on track. It is then that the colostrum can do its work and enhance the environment allowing your body to increase the stem cell population. The Info-peptides in the Cellworx stimulate production of CD4 cells which are the work horses of the immune system. In adults these begin to decline with age and become very lazy. Another compound found in Cellworx are Sialyl-oligosaccharides sugars which provide a good pathway for energy signals to pass from cell to cell which is vitally important. Another important compound in Cellworx are Neuro-peptides, they support brain function and allow good electrical signals to pass around the brain and also increase brain processes especially as people get older.

Colostem Capsules are a new generation of nutraceutical designed specifically to support and enhance the environment that allows stem cells to thrive and hopefully this allows the body to increase adult stem cell production.

A compound called fucoidan is added which is extracted from brown seaweed and works to stimulate adult stem cell production and it oversees the way the immune cells work. Fucoidan has sprung to world wide attention as a stem cell enhancer and is well proven scientifically to help stimulate immune response when the body is attacked and modulate the immune system. It also is known to regenerate cells, support good blood circulation and as a weapon in the war against cancer.

Also included in Colostem is Resveratrol a polyphenolic compound found in the skins of red grapes and some other plants. It has antioxidant and anti-inflammatory properties which are good for the heart and other coronary disease. It is known to fight cancer by inhibiting cancer cell proliferation and studies have shown it to have benefits with aging and cell regeneration.

Add to these the Alpha Lipid Colostrum and you have a powerful collection of compounds to fight illness and support the Adult Stem cell population. <http://www.colostrum4health.com/shop/commerce.cgi?product=Colostrum&pid=20>

Colostrum Is Not Just For The Sick:

Healthy people should be taking Alpha Lipid Colostrum or the Lifeline Breakfast drink as a matter of course to maintain good health and help the body fight off everyday challenges. It is a very cheap option for the healthy as serious illness is extremely expensive these days. As I mentioned at the beginning of this newsletter a hospital bed is not the sort of place you wish you had taken more care and done things better. Not only will the alpha lipid colostrum protect you from everyday illness but also help with anti aging and all sorts of everyday age related problems. From indigestion relief, moderating toilet problems, erectile dysfunction, pain modulation, muscle and tissue damage right through to higher energy levels. I believe a drink of lifeline every morning is one of the best investments a healthy person can make. It costs less than a cup of coffee!

Tablets vs Capsules:

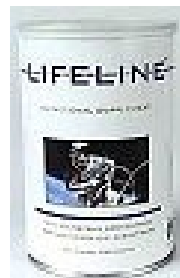

There has been some misinformation about the strength of the capsules versus tablets. The fact is that the tablets do contain a minute fraction more colostrum but they Both contain 25mg of Alpha lipid milk phospholipids. The Alpha Lipid does seem to be the a most important factor in cell communication and is exactly the same in both products. There is some cause to suspect that the capsules will work better If you want them to work lower in the gut for example if you have bowel problems whereas tablets are better if you want them to work higher up say for an ulcer or stomach problems.

Lactose Intolerance:

Another question often asked is about lactose intolerance however we should remember the biggest market for Alpha Lipid colostrum is Asia

which has a high degree of lactose intolerance. In processing the colostrum New Image remove a large proportion of the lactose, even though colostrum is low in lactose anyway. This is done with very special filtration technique only available to NI As a result there is only 200mg of lactose in a 2000mg serving of colostrum, the amount of colostrum in a single serving of alpha-lipid lifeline. This level of lactose is well below the level that seems to cause adverse reactions in people who are lactose intolerant. It is for this reason that NI do not see lactose intolerance symptoms in their very large Asian market, in some cases it has been found that the product often helps to overcome the symptoms of lactose intolerance.

Over the last two months I have had excellent feedback from many people as to how they have responded and while not everyone has had a "miracle" happen many report significant changes and increase in well being. We do have some excellent reports about MS, some improvements in Parkinson sufferers such as: *eating better, sleeping better, the pain in legs has diminished, and the upset stomach associated with the Contam used to enhance the Madopar effect has also diminished.* One user who suffers from a chronic egg allergy after three weeks on colostrum ate two eggs and grabbed a bucket. But it was not needed so while it is early days that is consistent with knowledge of what colostrum can do. People all comment about how pain diminishes and of course how their skin changes which is a sign that the colostrum is working.

I do hope this newsletter has been informative and I hope to hear some good stories of improvement from you all.

Cheers
Alan Simmons
